

With One Simple Act You Can.

Save Money. Save Energy. Save Birds.

Just Turn Off The Lights!

Why are buildings a threat to migratory birds?

Scientists estimate hundreds of millions of birds are killed every year due to lighted buildings.

When tall buildings are in the flight path of birds the lights interfere with their navigation system. The birds either fly in circles around the building and die of exhaustion or collide into the windows.

What You Can Do To Help The Birds:

Turn building lights off or draw blinds/curtains between 11 p.m. and daylight every night from March 15 through May 31 and from August 15 through October.

Save Money. Save Energy. Save Birds.

Just Turn Off The Lights!
